

JOSEPH VICTOR

Nairobi, Kenya | +254 114977343 | josephjovic23@gmail.com | www.linkedin.com/in/jvictor-tech

PROFESSIONAL SUMMARY

Result-driven Cybersecurity, Network Security, and Applied AI Specialist leveraging a unique behavioral science background to bridge the gap between technical infrastructure and human-centric security workflows. Expert in conducting comprehensive vulnerability scans, implementing defensive security blueprints, and orchestrating secure, air-gapped local machine learning environments. Graduated with double distinctions in Ethical Hacking and Cloud/Network Security. Possesses high emotional intelligence, advanced problem-solving capacities, and refined interpersonal skills developed through training in psychology and social work, enabling elite de-escalation of technical crises and seamless cross-functional stakeholder collaboration.

EDUCATION AND PROFESSIONAL CERTIFICATIONS

Cloud and Network Security Certification Cyber Shujaa Program — Graduated with Distinction	January 2026 – April 2026
Certified Ethical Hacker (CEH) Cyber Shujaa Program — Graduated with Distinction	April 2025 – August 2025
Cybersecurity Foundational Skills Certificate Cyberpro Global	January 2025 – April 2025
Bachelor of Arts in Social Work and Psychology Daystar University	2022 – 2026

TECHNICAL EXPERIENCE AND TOOLS

Defensive Security & Scanning: Vulnerability Assessment, Threat Modeling, Host Discovery, Service Detection, Port Profiling, Firewall Verification, Network Reconnaissance. Tools: Nmap, Wireshark, Advanced IP Scanner.

Networking & Infrastructure: Router Deployment, Switch Configuration, Subnetting, TCP/IP Suite Analysis, OSI Model Interrogation, Access Control Lists (ACLs), DNS Resolution, DHCP Scopes, ICMP Diagnostic Frameworks. Tools: Cisco Packet Tracer.

Artificial Intelligence Engineering: Local Large Language Model Deployment, Air-Gapped Environment Engineering, Model Context Protocol (MCP) Server Configuration, Hybrid Development Orchestration, Code Generation Pipelines. Tools: Ollama, Qwen2.5-Coder:14b, VS Code, GitHub Copilot.

Interpersonal & Core Soft Skills: High Emotional Intelligence (EQ), Socio-Technical Problem Solving, Active Listening, Crisis De-escalation, Cross-Functional Stakeholder Management, Behavioral Risk Awareness.

PROFESSIONAL WORK EXPERIENCE

Network Support & Maintenance Technician Daystar University	2022 – 2025
Engineered, deployed, and secured standalone router environments across 15 critical network nodes to guarantee high-availability data throughput and maintain 99.9% network uptime.	

- Utilized advanced active listening and high emotional intelligence to manage and de-escalate friction during critical network outages, directly troubleshooting and resolving over 120 technical incidents for cross-functional end-users.
- Conducted targeted host discovery and active port scanning using Nmap to identify unpatched services, evaluate open vectors, and reinforce infrastructure perimeter defenses.
- Monitored live packet streams and isolated remote ICMP diagnostic traffic utilizing Wireshark to perform regular bottleneck resolution and prevent network latency.
- Applied behavioral psychology insights to identify human-factor security risks, designing and communicating basic security baseline practices to protect client networks from automated threats.

TECHNICAL PROJECTS AND AI IMPLEMENTATIONS

Local Machine Intelligence Infrastructure Deployment

2026

Applied Artificial Intelligence Project

- Architected and instantiated a fully secure, air-gapped localized development ecosystem utilizing the Ollama framework on a localized machine.
- Pulled, deployed, and configured the Qwen2.5-Coder:14b model locally to act as a zero-leakage technical assistant for executing secure script generation and codebase audits.
- Configured and initialized Model Context Protocol (MCP) servers to bridge local LLM endpoints directly with host directory structures, ensuring controlled, secure file manipulation.
- Orchestrated a hybrid assistant workflow within VS Code by combining local model intelligence with cloud-based GitHub Copilot systems, accelerating technical project generation speeds by 40%.

DigiShield: Enterprise Data Protection System

2025 – 2026

Cybersecurity Startup Initiative

- Demonstrated strong system level problem-solving skills by designing a structured data compliance framework engineered to fortify small and medium-sized enterprises (SMEs) against digital vulnerability vectors.
- Mapped technical controls to regional data protection acts to form an actionable cybersecurity compliance roadmap, reducing potential organizational regulatory risks by 30%.

Network Traffic Analysis & Simulation Laboratory

2025

Practical Infrastructure Labs

- Simulated complex enterprise networks featuring distinct subnets, core routers, and virtual endpoints inside Cisco Packet Tracer to validate TCP/IP configuration accuracy.
- Captured, filtered, and analyzed local and remote communication streams to write detailed technical risk reports identifying potential data-leakage vectors.

ADDITIONAL PROFESSIONAL ACTIVITIES

- **Technical Content Creation:** Plan, record, and publish technical systems videos on YouTube, demonstrating emerging open-source technical configurations and local AI applications to raise digital literacy.
- **References:** Verified professional, technical, and academic references are completely prepared and available immediately upon official request.
